PROJECT REPORT

Streamlining IT Procurement: Automating Standard Laptop Orders with ServiceNow Flow Designer

1. Project Title

Streamlining IT Procurement – Automating Standard Laptop Orders with Flow Designer

2. Introduction

The project focuses on automating the IT procurement process for **standard laptop requests** using **ServiceNow Flow Designer**. The existing process involved manual activities that could cause delays, missed configuration tasks, and additional workload for the IT procurement team.

The implemented workflow automatically creates a **Catalog Task** after the service request is approved and assigns the task to the **Hardware** assignment group for laptop configuration.

3. Problem Statement

The existing IT procurement process had limited automation. Standard laptop requests required configuration, but manual handling could result in:

* Delays in laptop configuration
* Increased manual intervention
* Possibility of missed tasks
* Inefficient allocation of IT resources
* Increased waiting time for users

The project addresses these issues through an automated ServiceNow workflow.

4.User Story

As a member of the IT procurement team, I want a streamlined process for ordering standard laptops so that tasks are automatically generated and assigned to the Hardware team for configuration.

This ensures that laptops can be configured promptly after arrival and reduces manual intervention.

5. Project Objectives

The main objectives are:

1. Automate the standard laptop procurement process.
2. Automatically create a Catalog Task after approval.
3. Assign the task to the **Hardware** group.
4. Reduce manual intervention and errors.
5. Improve task allocation within the IT department.
6. Reduce user waiting time.
7. Improve overall IT procurement efficiency.

6. Tools and Technologies Used

Tool/Technology	Purpose
ServiceNow	IT Service Management platform
Flow Designer	Create and automate the workflow
Service Catalog	Submit the standard laptop request
Catalog Task	Track laptop configuration work
Hardware Assignment Group	Handles laptop configuration

7. Implementation

Milestone 1 – Creating the Flow

A new Flow named **“Standard Laptop Task”** was created in ServiceNow Flow Designer.

The flow was configured with:

* Application: **Global**
* Run as: **System User**
* Trigger: **Service Catalog**
* Action: **Create Catalog Task**
* Request Item Record: **Requested Item Record**
* Short Description: **Laptop need to Configured**
* Description: **Laptop need to Configured**
* Assignment Group: **Hardware**
* Approval: **Approved**

After configuration, the flow was saved and activated.

Milestone 2 – Assigning the Flow

The created flow was assigned to the **Standard Laptop** Service Catalog item.

The existing process automation was replaced with the newly created **Standard Laptop Task** flow.

Milestone 3 – Testing the Service Catalog

The **Standard Laptop** item was opened from the Service Catalog and an order was placed using **Order Now**.

The request was then checked through the request and approval sections. After approval, the Requested Item record was opened and the generated Catalog Task was verified.

8. Workflow

Standard Laptop Request
↓
Service Catalog Order
↓
Request Submitted
↓
Approval
↓
Approval = Approved
↓
Flow Designer Triggered
↓
Catalog Task Created
↓
Assignment Group = Hardware
↓
Laptop Configuration Task

This workflow automates the transition from an approved laptop request to the hardware configuration task.

9. Project Output

The completed ServiceNow task demonstrates that the automation is functioning.

From the provided screenshot, the generated Catalog Task **STCASK0010001** shows:

* **Approval:** Approved
* **Priority:** 4 – Low
* **State:** Open
* **Request Item:** RITM0010001
* **Requested For:** System Administrator
* **Short Description:** Laptop need to configured
* **Description:** laptop need to configured
* **Active:** Yes

This confirms that the Catalog Task was successfully generated with the configured request information and is ready for handling by the appropriate team.

10. Results and Benefits

The implemented solution provides:

* **Automation:** Catalog tasks are generated automatically.
* **Faster processing:** Reduces manual steps after approval.
* **Better task assignment:** Tasks are directed to the Hardware team.
* **Reduced errors:** Standardized workflow reduces manual configuration mistakes.
* **Improved productivity:** IT staff can spend less time on repetitive activities.
* **Better user experience:** Faster laptop configuration can reduce waiting time.

11. Conclusion

The project successfully demonstrates the use of **ServiceNow Flow Designer to automate standard laptop procurement**. The workflow connects the Service Catalog request and approval process with automatic Catalog Task creation and assignment to the Hardware group.

The completed implementation reduces manual overhead, improves task allocation, and supports timely laptop configuration. Overall, the project provides a streamlined and efficient approach to standard laptop procurement within an IT environment.
